

Kids Have Stress Too!

Curriculum Connections

Prince Edward Island Grades 1-3

There is strong evidence that developing social-emotional learning skills at school contributes to student well-being and successful academic performance. Learning about mental health can also help to reduce the stigma around problems in this area. When students understand that many people experience mental health difficulties from time to time, and that there is support available when needed, they are more likely to seek help early when problems arise.

As they develop SEL skills, students will also gain "transferable skills" (for example, self-directed learning, collaboration, critical thinking, communication and innovation) and develop "learning skills and work habits" as they learn to set goals, follow through and overcome challenges. These interconnected skills taken together, help foster overall health and well-being, and the ability to learn, build resilience and thrive. Helping students make connections among these skills is key to enhancing their learning experience in school and throughout their lives.
